San Chaung Township, Nyaung Tone
Street, Yangon, Myanmar

TECHNICAL SKILLS

Languages

Golang, PHP (Laravel), JavaScript, React
(basic), Perl

Web & APIs

REST APIs, HTTP, JSON, HTML, CSS,
Bootstrap

Data & Messaging

MySQL, Redis, Kafka

Infrastructure & Tools

Linux, Docker, Git, Command-line utilities

Practices

Agile collaboration, cross-team
requirement gathering, root-cause
debugging

EDUCATION

BSc (Hons), Computing

University of Greenwich — Final year (in
progress)

Level 4 & 5 Diploma in Computing

NCC Education

English (Major), Year 1

Dagon University (Distance Education) —
in progress

CERTIFICATIONS

ITPEC — IP (Information Technology
Passport)

ITPEC — FE (Fundamental Information
Technology Engineer)

LANGUAGES

Burmese — Native

English — Professional working
proficiency

THEIN OKE PAING SOE

WEB DEVELOPER | SOFTWARE ENGINEER

PROFILE

Web developer with production experience building and maintaining REST APIs and full-stack tooling in Golang, PHP (Laravel) and Perl, alongside working knowledge of JavaScript and React. Comfortable owning the full delivery cycle — gathering requirements directly from stakeholders, implementing the solution, and supporting it in production. Solid grounding in RESTful services, relational databases, version control and Linux/Docker environments, with a genuine interest in code quality, testing and automation. Clear written and spoken English, sharpened by ongoing English-major studies, and used daily to work cross-functionally with engineering and non-engineering teams alike.

WORK EXPERIENCE

Software Engineer — Frontiir

Mar 2025 – Present

- Develop and maintain external-facing REST APIs in Golang for the company's Request Tracker (RT) ticketing system, powering integrations used across support operations.
- Build and extend the Request Tracker web application in Perl using a layered backend/frontend architecture with Mason templates.
- Built a Go CLI application that consumes real-time messages from Kafka and automatically updates ticket status, eliminating a manual step for the support team.
- Built a Laravel-based CLI application, scheduled via cron, to migrate closed/aged tickets from the live RT database to an archive database, improving production database performance.
- Work hands-on with MySQL and Redis for data storage, caching and query troubleshooting; deploy and operate services on Linux using Docker.
- Act as requirements host in cross-functional meetings with Systems, Customer Support, NOC and OSS teams — translating operational needs into technical specifications and carrying them through to production release.
- Investigate and resolve production issues across the ticketing pipeline, tracing root causes across API, message-queue and database layers.

PROJECTS

RT Web Application • *Perl, HTML, CSS, JavaScript, React (basic)*

Extended the Request Tracker web application's frontend and backend in a layered architecture, contributing UI components with light React usage alongside the core Mason/Perl stack.

RT Database Archive Tool • *PHP, Laravel, Artisan*

Built a Laravel Artisan command-line tool to migrate closed and aged tickets from the live database to an archive database on a cron schedule, reducing load on the production database.

RT-Util (Remote Ticket Resolver) • *Golang, CSV processing*

Developed a Go CLI utility that reads ticket data from CSV files and resolves/updates tickets remotely, streamlining a previously manual support workflow.

Queue Transfer Service • *Golang, CSV processing*

Built a Go service that reads queued ticket records from CSV files and transfers/synchronizes them into the ticketing system, removing a manual data-entry step.

RT-Kafka Integration for RT-Util • *Golang, Kafka*

Integrated Kafka messaging into rt-utils so tickets can be updated automatically from an external system in real time.

RT External API • *Golang, REST*

Designed and implemented external-facing REST API endpoints in Golang to expose Request Tracker data and actions to other systems.
